

## **INFORMATIONS ABOUT CODES:**

« *analysis.ipynb* » : Analysis of the confined Brownian trajectory

« *fpt.ipynb* » + « *FirstPassageTime.py* »: Extraction of the first-passage time statistics, and comparaison with a Langevin simulation

« *simulation\_and\_fpt.ipynb* »  
+ « *FirstPassageTime.py* »: Comparaison between the bulk and confined Levy distribution (along x), and between Non-Gaussian and Gaussian process (along z) for simulation, extraction for  $\Delta T/T$  (Lambda)

Remark : these codes might need usual packages given in the EMetBrown GitHub.
